

JetCAPS[®] SD Express[®] Printing

easy and secure document distribution

JetCAPS Secure Document (SD) Express Printing uses the Internet and HP Chai technology to provide simple, affordable and secure remote printing.

Imagine that printing documents across the country – or across continents – was as easy and secure as printing them to your local desktop printer. Imagine that remote offices and home workers could access your office printers using the Internet, rather than expensive dedicated networks or complicated virtual private networks. Imagine that you had a fast and affordable alternative to certified mail and couriers.

With JetCAPS SD Express Printing, you can stop imagining and start printing. Authorized users, whether they are remote employees or selected business partners, can access office printers equipped with JetCAPS SD Express Printing across the Internet. Data encryption ensures privacy and document integrity. The result is the security of courier delivery, at the speed of a fax, with the quality of a HP LaserJet printer.

how JetCAPS SD Express Printing works

The JetCAPS SD Express Printing Logic Module is inserted into the DIMM slot in any HP LaserJet printer with HP Chai capabilities. The SD Express Printing client encryption software is installed on the PCs of authorized users located anywhere on the web, or within the company Intranet.

Users simply set their application to output to the remote printer the same way they select any other printer. The JetCAPS SD Express Printing software automatically encrypts the data and e-mails it to the printer. When the printer receives the data, an e-mail is sent to the user to confirm receipt. To ensure the security and integrity of the data during transmission, or in the printer queue, the data is only decrypted as it is printed. If, for whatever reason, the document is sent or rerouted to the wrong printer, the output is unreadable.

Printed on an HP Color LaserJet Printer

characteristics

- access to remote printers without expensive dedicated networks or complicated virtual private networks
- secures documents all the way from the application to the instant of printing

special features

- uses the Internet and HP Chai Server technology for a simple and affordable remote printer application
- uses the latest, Rijndael Advanced Encryption Standard

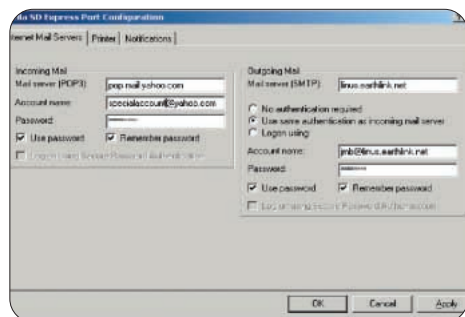

areas of application

- cost-efficient printer access for remote employees and selected business partners
- fast, secure delivery of confidential or sensitive documents without compromising quality

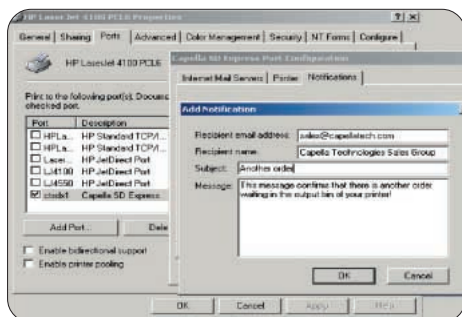

ordering information

- available for hp LaserJet 4200, 4300 and 9000 printers, for hp color LaserJet 4600 and 5500 printers, and 4100mfp and 9000mfp printers
- also available for other recent hp LaserJet printers, on request
