

FlashBox: non volatile memory for every printer

„Electronic Forms“ instead of expensive preprinted forms - The Intelligent Alternative!

The FlashBox which is directly connected to the parallel interface of your printer offers you the possibility to store 'electronic forms' in your printer and print them on demand. So the times are gone when thousands of preprinted forms get unusable due to old information placed on this forms.

If your printer does not have a free memory slot anymore or just does not have the possibility for placing memory extensions, the FlashBox will be the solution for your problem. Just plugg it to the parallel port and you get the full functionality of a flash memory.

This revolutionary solution bases on the 'intelligent printing concept'. The flash memory stores your forms in a non volatile memory chip or on printer harddisk. So the forms are recallable at once and printable in highest quality on common paper.

Benefits: Saving printing costs, stockkeeping costs and administrating costs. And by the way you can be sure, that your customer will be really impressed about your constant high quality of your documents.

But there is more to it than that: The intelligent printing solutions by stethos contributes to a better distribution of information in your enterprise - lower network traffic, raise security against misapplications of documents and offers you the possibility to act faster on changes in the market.

Electronic forms like forms, letter heads, print forms or other frequently used documents can be called out of any application like SAP R/2 or R/3, UNIX, OS/2, Windows, etc.

Flash memory for 'electronic forms' gives you a lot of remarkable benefits:

Cost savings

If you print all forms and documents on demand, you save the costs for preprinting, stockkeeping and distribution. You beware of documents which get unusable, caused only by changing a single telephone number. Employees have no longer to change preprinted forms at the printer only to have the correct form for the actual print job, means an enormous time saving.

All forms up-to-date

With a flash memory solution you are able to change your forms at any time and send the changes with one job to every printer in your network. The changes are available in the next moment.

Effecient network use

Intelligent local printers lower the network traffic. Beware of data bottlenecks and lower your telephone costs by storing complex forms and graphics in the printer instead of sending them with every print job.

High security

With electronic forms you raise the security against misapplications of documents.

Consistent documents

Upon help by flash memory solutions all divisions in enterprises can produce the same document on demand and it the distance between them does not matter. No more cost intensive distribution of copies.

High quality with every print job

Problems with positioning the new text in preprinted forms exist no longer. You are able to print your forms together with the text you want to place in, that guarentees you perfect fittings at any time.

FlashBox: 'non volatile' memory for every printer
