

MegaForm

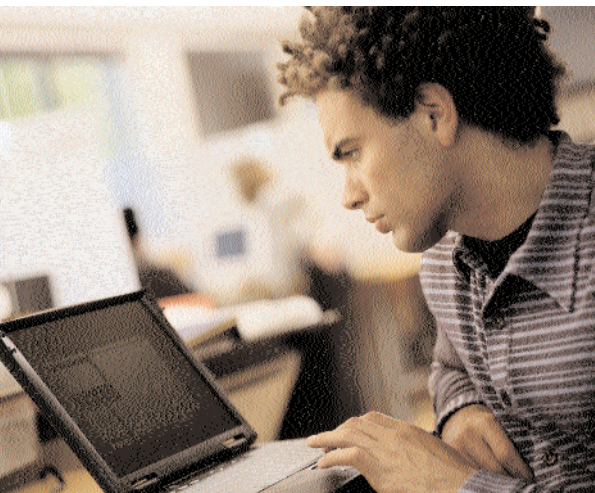

MegaForm : **Multi-PLatForm** Electronic **Forms**

Producing high-quality business forms is a fundamental part of the professional presentation of your company. The content must be correct, but the presentation is just as important in determining how your contacts perceive your organisation. All too often your applications fail you by not providing you with the ease and flexibility you need to create printouts that project your image .

MegaForm is the easy way to escape such limitations in your applications.

It provides you with a quick and programming-free method of replacing old impact printers and preprinted forms with fast, high quality laser-printed forms. No modification to existing applications is usually required. And you reap many other rewards into the bargain. Not least of which is the huge opportunity for savings you can make due the efficient printing of electronic stationery and color and monochrome business forms.

MegaForm turns raw printer or data files into high quality professional electronic forms.

How MegaForm **works** :

- The IT department creates the Electronic Forms, based on the corporate design, using the drag-and-drop, WYSIWYG layout and graphics capabilities of MegaForm Design Pro. These capabilities include the static and conditional integration of sub-forms, calculations, functions, validations, bar-codes and imported data. The calculations and validations encompass, for example, Euro currency conversion, or validation of dates after the year 2000.
- Spool data output by existing applications are remapped to the new electronic forms, using the mouse.
- MegaForm Print implements the electronic forms designed by MegaForm Design Pro, by dynamically formatting ASCII print files, merging the data necessary from other sources, and controlling the conditions and bundling necessary for multi-platforms. MegaForm Print also performs the specified calculations and validations. MegaForm Print uses its own high performance drivers to produce print jobs optimized for the most efficient use of your existing printing and network infra-structure, while exploiting the full range of your printer's functionality.
- The MegaForm Server adds an extra layer of administration capabilities to MegaForm Print. It can supervise and select the print jobs for further processing, can re-route them to fax, e-mail or archiving systems, as necessary, and even combine the performance of a number of printers to increase throughput (cluster).

ERP Integration :

Megaform Server can easily manage data coming from ERP systems like SAP, Baan, PeopleSoft, Generix, Oracle, JD Edwards ... All you need to do is to set up your ERP to print ASCII data to the MegaForm printer queue. Then MegaForm will intercept, remap and turn your data into professional electronic form.

Further Specifications

MegaForm Design Pro

- Multi-page form design.
- Advanced data remapping.
- Advanced graphic functions: color, frames, lines, half tones.
- Units in mm, cm, inches or pica.
- Calculation and validation fields.
- Conditional insertion of pictures.
- Runs under Windows 95/98, NT and 2000.

MegaForm Print

- Automatic " carbon-copies ".
- Forms dynamically adapted to the target printer (multi-language).
- Macro commands for dynamic formatting.
- Support for printer internal and optional fonts.
- Bar code support (3 of 9, 2 of 5, EAN13, EAN128,...).

- Management of input and output trays, duplex printing, stapling, binding ...
- Compact form files (2 to 20 kB per page).
- Runs under Windows 95/98/NT/2000, UNIX and OS/2.

MegaForm Server

- Selective interception of data files in the print manager.
- Merging of data files with MegaForm electronic forms, printing on the original printer.
- Archiving, re-routing, reprinting and apportionment of print jobs.
- MegaForm Cluster Module to group hp Laserjets together to provide scaleable, high volume printing.
- Apply unlimited processes to your data flow by calling external agents (data compression, conversion ...)

- Faxing and emailing of data.
- Runs under Windows NT, supports data coming from UNIX, AS/400, Mainframes and other systems

MegaForm WEB Archives

The Archive module which enables any authorized user in the company to find and visualize MegaForm eForms documents through a WEB browser.

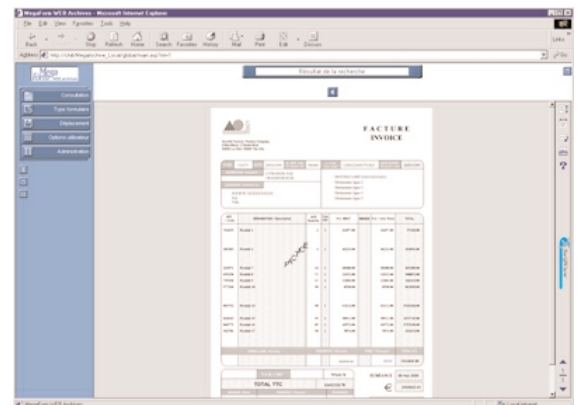

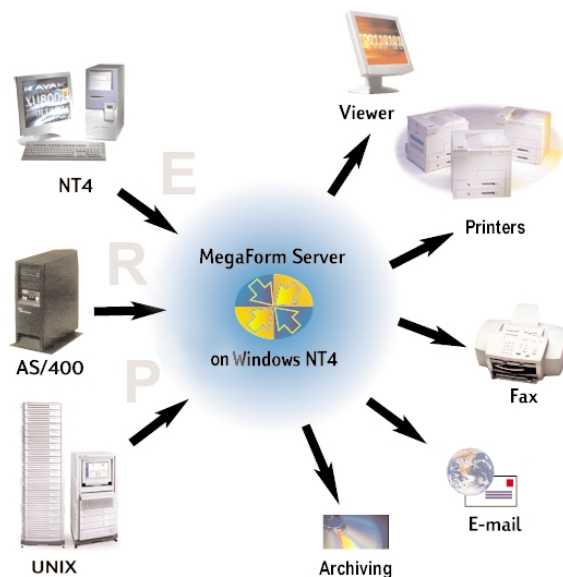

Thanks to MegaForm WEB Archives, it is now possible to archive all these documents automatically on the Intranet at the exact moment they are generated.

The MegaForm Web Archives's ergonomical interface enables the user to find a MegaForm document easily through a query, according to the type of document (invoice, delivery slip...), according to the printing date, to the indexed fields (client num-

ber, name, amount..), according to the sender as well as to many other criteria. The document automatically appears in the web browser as it was printed and at the required page.

MegaForm WEB Archives uses the latest Microsoft technologies. It works on a Windows NT or a Windows 2000 server and relies on the powerful SQL Server database to store archives. It also includes long term archiving, with the transfer of archived documents on external storage devices (CD, DVD, tapes...)

Minimum requirements :
Windows NT4, Service Pack 4 (SP4), IIS4 Typical Installation, Option Pack 4 Standart Installation, MSDE or SQL7 Desktop Installation.
