

LocTray

Lockable Security Tray for HP LaserJet 4100

LocTray has been developed to provide a reasonably high level of security of access to stationery contained within the lower paper tray of any HP LaserJet 4000, 4050 or 4100 series printer. Fitted into existing fixing points to the underside of the printer with standard or unremoveable screws (supplied) **LocTray** will deter all but the most determined thief, providing security for important stationery such as cheque stock or simply to stop the theft of paper in open access areas such as Universities.

Locked position

Unlocked position

LocTray in locked position shown with
LaserJet 4100

Paper tray open

LocTray incorporates a locking tab that, in the locked position, inhibits removal of the paper tray. For added security the locking tab provides a visual indication to show if the paper tray is locked or unlocked.

LocTray

Lockable Security Tray for HP LaserJet 4100

LocTray also provides security of access to the rear of the printer. An access guard is fitted onto the rear of the lower paper tray which cannot be removed when the paper tray is in the closed position and locked. The access guard is easily removed and re-fitted in seconds whenever the paper tray is opened for re-loading stationery.

Access guard in position over rear of lower paper tray

Access guard removed from rear allowing the lower paper tray to be withdrawn

LocTray is quickly and easily fitted and does not require any modifications to the LaserJet printer
