

make the paper do the work

JetCAPS paper solutions offer a wide range of custom media to enlarge the possibilities offered by your HP LaserJet printer.

Have you ever thought about using paper as a critical part of re-engineering your business processes? Your JetCAPS partner has.

With or without other JetCAPS paper-handling and extended printer functionalities, JetCAPS Paper Solutions can easily increase the versatility of your HP LaserJet printer and improve the return on your printer investment. The right print medium can enhance the efficiency of your processes and boost your productivity by simplifying applications such as printing invoices, reminders, pay slips, itemized accounts, statements, mail shots, or letters with tear-off checks or integrated labels or cards.

simple steps for improved processes

- Dispense with the extra cost and effort of envelopes. With **self-mail** stationery you just print, fold and post. These self-adhesive sheets are suitable for all HP DeskJet and HP LaserJet printers: you print your content on one side, and address information on the other, then fold and press to activate the glue. For larger quantities, you can automate the folding and sealing, with a standalone unit that operates at up to 1800 documents per hour. Your JetCAPS partner can also supply you with a range of paper handling devices, such as conventional folders and inserters for use with envelopes, to simplify all of your paper processing.
- For greater process simplicity, **separable** stationery means you can include your payment instrument as part of your correspondence. Easily separated checks, drafts, or promissory notes can be combined with the relevant letters, invoices, or advertising. This is of benefit to your customers too, and is also available as **separable self-mail** stationery to streamline your processes even further. Using the magnetic ink printing capabilities of the JetCAPS MICRDIMM to support machine sorting of your payment devices can bring further process improvements.

Printed on an HP Color LaserJet Printer

integrated elements - integrated value

- Increase the value of your communications by incorporating removable elements:
 - Use stationery with **integrated labels** in standard sheets, so you can include return addresses, reminders, barcodes (using a JetCAPS barcode printing solution) that the recipient can just peel-off and use.
Please note, JetCAPS label solutions have the label integrated into the printing surface, and not merely stuck onto the page. This small but important difference eliminates the strain that can otherwise cause problems for your printer over a longer period of time.
 - For membership, identification or quick-reference cards, as well as for many other applications, you can use stationery with **integrated cards** (paper or printable plastic). You simply print the card as part of your letter, and the addressee can separate it from the document for further use.

hide or copy

- To restrict access to sensitive information, such as PIN codes or passwords, you can use stationery featuring a special **concealing foil**, through which you can print, but which then hides the information until the document reaches its destination.
- For agreements and other multi-part forms and documents that are due to be signed or completed after printing, you can use **laser-printable carbonized** stationery to duplicate signatures or changes on the second and following sheets.

much more

These are a selection of the specialty paper solutions in the JetCAPS program. If you have a specific requirement, please contact your local JetCAPS partner for information on the full range of possibilities.
